## **Who Classification of Tumours of the Central Nervous ...**

The central nervous system consists of the brain and the spinal cord. It is part of the overall nervous system that also includes a complex network of neurons, known as the peripheral nervous system. The nervous system is responsible for sending, receiving, and interpreting information from all parts of the body. The nervous system monitors and coordinates internal organ function and responds to changes in the external environment.

## **Functions of the Central Nervous System - ThoughtCo**

The nervous system is very complicated. It controls how you move, how you feel, and also how your internal organs work (heart, stomach, etc.) There are two major parts of the nervous system--the central nervous system and the peripheral nervous system. The central nervous system is made up of the brain and
