Parametric Statistics, like t-tests and ANOVA, require that the dependent variables are either interval or ratio in data type. They also assume a normal distribution of the the data and similar or homogeneous variances. For this lesson we will be focusing only on different types of t-tests. For this lesson we will be using a number of different ...

There are two formulas for the test statistic in testing hypotheses about a population mean with small samples. One test statistic follows the standard normal distribution, the other Student's  $t$ -distribution. The population standard deviation is used if it is known, otherwise the sample standard deviation is used.

Statistics in Action promotes a modern, data-analytic approach to learning statistics that allows students to uncover, display, and explore patterns in data. Most data sets are real-based on up-to-date research, historical case studies, and student-collected data. Students use tools systematically to build a coherent description of data-set patterns and to describe patterns in the language of ...
