Paul D. MacLean has distinguished himself as a foremost figure in neuroscience. His early contributions to the understanding of the brain lie most notably in the area that he has named the limbic system. For the past thirty years, he has dedicated his research efforts at the NIMH Laboratory of Brain Evolution and Behavior, which he heads, to the promotion of his theory of the triune nature of ...

The Triune Brain | The Science of Psychotherapy

Triune Brain (dtsch.dreieiniges Gehirn) ist die Bezeichnung für ein in den 1950-60er Jahren von dem US-amerikanischen Hirnforscher Paul D. MacLean (1913-2007) entwickeltes und ab 1970 mehrfach unter diesem Namen veröffentlichtes Konzept. Es konstruiert evolutionäre Abläufe, die sich scheinbar in den Funktionen und Strukturen des menschlichen Gehirns widerspiegeln.

According to MacLean, the hierarchical organization of the human brain represents the gradual acquisition of the brain structures through evolution. The triune brain model suggests the basal ganglia was acquired first, which is thought to be in charge of our primal instincts, followed by the limbic system, which is in charge of our emotions or ...

Brain Evolution—The Triune Brain Theory

In its evolution the human forebrain expands along the lines of three basic formations that anatomical and biochemically reflect an ancestral relationship, respectively, to reptiles, early mammals, and late mammals. MacLean describes this as the Triune Brain. No ownership marks and no signs of use.
